Our Philosophy

It is our daily challenge to see the world through the eyes of people with physical disabilities. Protecting and promoting mobility and vitality through technology for people makes an important contribution to quality of life – all over the world.

Our strong Otto Bock trademark is carried by outstanding innovative power and technological leadership, a broad spectrum of services, the global presence of our sales and service network, and our committed, qualified employees all over the world. We profess that the vision of our company is to provide people with the highest level of mobility and independence.

As the global market leader in prosthetics, Otto Bock HealthCare sets the standards. The pace of development has accelerated rapidly due to new technologies. At the same time, every innovation at Otto Bock is created based on decades of experience in our successful company history. Therefore we do not experience progress and tradition as a contradiction but as a natural entity. From our past, we have learned that the following must continue to apply in our future research and development: People first!

 Otto Bock®

at

QUALITY FOR LIFE

- Cutting-edge technology in (exo-) prosthetics for upper and lower extremities
- State-of-the-art patient care – services at its best
